

## Installation Instructions Part BC-2 Battery Monitor

**NOTE: Read Instructions Carefully Before Installing**

1. Select the location of the monitor and drill a 1/8" hole.
2. Peel the back of the adhesive patch and put the wire through the drilled hole.
3. Route the wire to the battery. Connect the red wire to the positive and the black to the negative with the connectors. Cut off any excess wire before putting ends on.

**Important Note:**

This monitor can save you much time and expense of being stranded. Make sure that the battery is at least the 25% mark before leaving. Do not run any accessories until the 50% mark has been reached. The 75% and 100% marks indicate the charging systems are working. If the red light comes on, check your fluid levels and terminal connections.
